

CALL FOR PAPERS

Perspectives is a new publication of the International Society on Information Fusion (ISIF) <http://isif.org/>. Its role is to support the goals of ISIF in ways that both supplement and complement those of its more staid older sister, the Journal on Advances in Information Fusion (JAIF). It will publish open forum articles that promote technical dialogue and creative outreach to students and other communities of interest in the following areas:

- ▶ Up-to-date survey articles on new and emerging applications and methods;
- ▶ “Bridging” papers that support interdisciplinary discussions that seek to cross the divide between lower and higher level fusion;
- ▶ Expository papers and tutorials to stimulate technical discussion and dialogue;
- ▶ “Classroom notes” on established technical topics that are addressed to students, but written to interest specialists and those who teach;
- ▶ Papers that spotlight the achievements of students at the annual Fusion Conference;
- ▶ Tables of Contents of JAIF and related refereed professional journals, new Ph.D. thesis titles and abstracts, and relevant job opportunities;

- ▶ Postings of Calendars of announcements of Meetings and Calls for Papers by ISIF and other professional societies deemed of potential interest to ISIF members.

Perspectives has an ambitious agenda. To achieve it we, the Editors, need inputs from our members and, most importantly, we need papers that support these goals.

Perspectives seeks bridging papers, expository papers and tutorials, and classroom notes on any topic of general interest to the ISIF Fusion community. Fresh points of view on established topics are especially welcome. Topics of interest include all those listed on the Fusion 2015 website <http://fusion2015.org/> under the broad categories of (1) Theory and Representation, (2) Algorithms, (3) Modeling, simulation and evaluation, and (4) Applications.

Papers can be submitted online at <http://perspectives.msubmit.net/cgi-bin/main.plex>. The maximum page length for submissions is six (6) pages in JAIF two-column paper format.

All paper submissions will be reviewed for technical content and style, as well as its suitability for *Perspectives*. All papers accepted for publication will be written in a relaxed, informal, colloquial style that facilitates understanding by a wide audience.
